

The **ACE Brace** is a comfortable, cosmetically-appealing hyperextension brace. It is designed with options that allow medical providers to optimize patient compliance, such as fully articulating, self-centering pectoral plates and an easy-to-use front closure.

Features

The ACE Brace outperforms traditional cruciform hyperextension orthoses because of three standard features:

1. V-style pectoral top eliminates sternal pressure and throat impingement
2. Front closure allows easy donning by arthritic geriatric hands
3. One-size-fits-all back strap saves the orthotist time and travel.

The V-shape design of the ACE-PV and ACE-PS allows these braces to remain unseen when worn under clothing.

Variations

- ACE - PV Pectoral Velcro
- ACE - PS Pectoral Silicone
- ACE - ST Sternal (Hinged)
- ACE - PV and ACE-PS feature patented separately-articulating self-centering pectoral plates
- ACE - ST features sternal top plate

Note: When you order the ACE Brace with long bars (vertical and/or horizontal), the larger sized back pad is included at no extra charge.
