

The HippO™ is a universal, low profile, lightweight yet sturdy hip abduction orthosis.

Features & Variations

- The universal design (left/right, male/female) reduces the cost to maintain a complete inventory of HippOs.
- Anatomically molded side panels grip over the ilia.
- The HippO resists rotation like no other hip orthosis.
- The pelvic girdle has four angular and sliding adjustments for precision fitting of the orthosis.
- The bivalve thigh cuff design fits any shape thigh.
- The HippO components are interchangeable and adjustable, allowing you to achieve a custom-like fit.
- The flexion/extension joint has 10-degree ROM stops as well as an infinite range of abduction settings.
- The HippO is available complete or by components.
- There are 3 alternate bar lengths (short, long & x-long)
- A shim kit to outset the hip joint 1/4" is available.
