ROM-SS (Suspension Solution)

The new ROM-SS (Suspension Solution) is the first post-op knee brace specifically designed to reduce brace migration. Featuring Townsend's C/S Package and semi-malleable aluminum cuffs that can be contoured to the sides of the leg, this brace will suspend better than any traditional post-operative knee brace. The ROMSS also features a patient-friendly drop lock mechanism and tool-free length adjustment -- the standard model extends from 17-22 inches and the longer model extends from 19-24 inches. Rotating pull arms, under the cap, make it easy to set extension and flexion stops.
