

The **VertaLux™** is a modular spinal brace that provides aggressive torso control by virtue of a molded polyethylene aggressive posterior shell. This shell supports the back where the spine needs it and cushions the front where the patient needs it.

# VertaLux™

## Features & Variations

- Posterior shell includes spinal-corrugation ring, spinal-relief oval, molded tongues, and plush tri-laminate liner
- Front plate is pre-drilled for easy Extender™ attachment
- 3 front heights, each in neutral or pendulous
- 3 back heights, each in four lordosis variations
- An alternative VertaLux Lite™ is available
